Summary

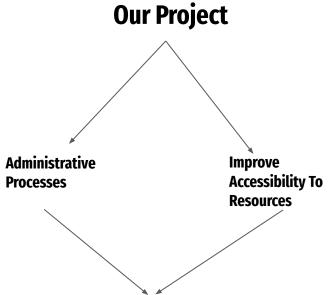

1. Introduction

"Crescendo of Change"

Introduction

Revolutionize the way conservatories operate and elevate the overall student experience

2. Problem Statement

Challenges

Time and Energy Consumption:

Intensive paperwork process for administrative tasks(registrations, attendance, salary calculations, and event participation)

Limited Accessibility:

Paper-based records stored physically making them Inaccessible outside the conservatory's premises.

Communication Barriers:

Potential missed calls and difficulty in coordinating schedules.

Lack of Real-Time Updates:

Limited real-time updates on important information.

Delayed notifications about academic performance and events.

Risk of Data Loss or Damage:

Susceptibility of paper documents to loss, damage, or deterioration.

Inefficient Payment Processes:

Restriction to cash or checks for payments.
Inconvenience for parents preferring digital payment options.
Resulting delays in fee payments.

Limited Scalability:

Escalating burden of paperwork as student enrollment grows.

Manual processes becoming increasingly difficult to manage.

Problematic

How can El kindy address these challenges in order to enhance efficiency and effectiveness in its administrative operations and overall management?

3. Solution

3. Solution

Our solution aims to provide a dynamic website that handles all administrative tasks easily and quickly using this digital platform

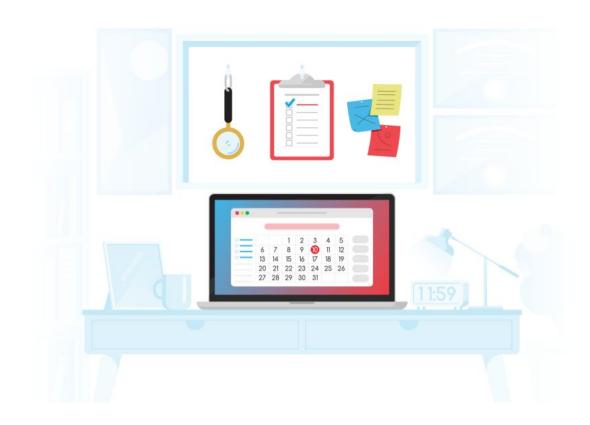

Registration and payment

Lesson Scheduling

Tests and grades

Online Marketplace

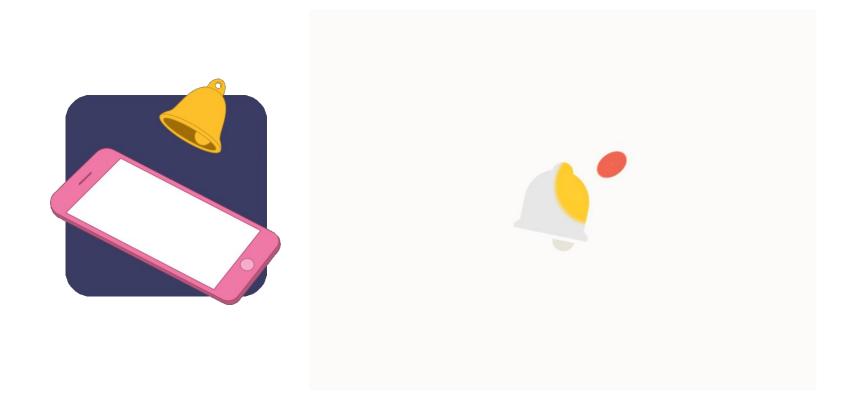

Musical Events

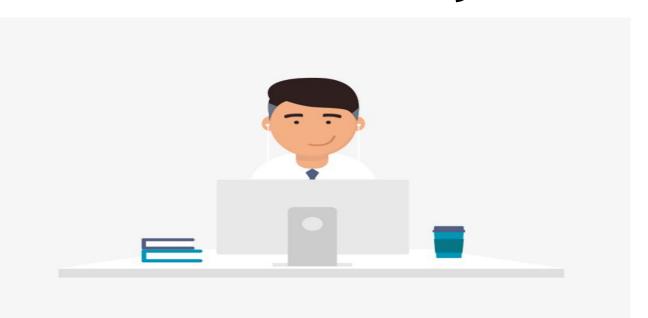

Real-Time Notifications

Finance management

4. Key features & benefits

Advanced event attendance rate estimation:

Increased Revenue

Based on saved information from the database, we will build an estimation algorithm that predicts the attendance rate of a specific event and estimates the potential profits that it will generate.

Marketplace products recommendation system:

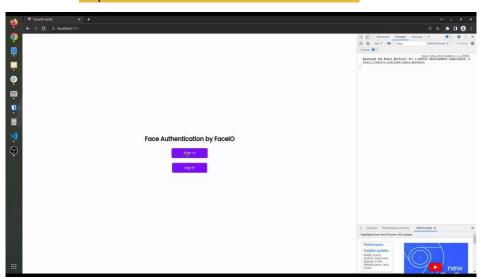

Enhanced User Experience / Higher Sales

We will build a recommendation Al engine that helps the customer choosing the best product that meets their needs based on their purchase history.

Face-id authentication:

Improve User Trust / Reduce Fraud Risk

We will help clients signing in using face-id in order to add an additional security layer to the web application.

Real-Time Chat:

Enhanced Customer Support

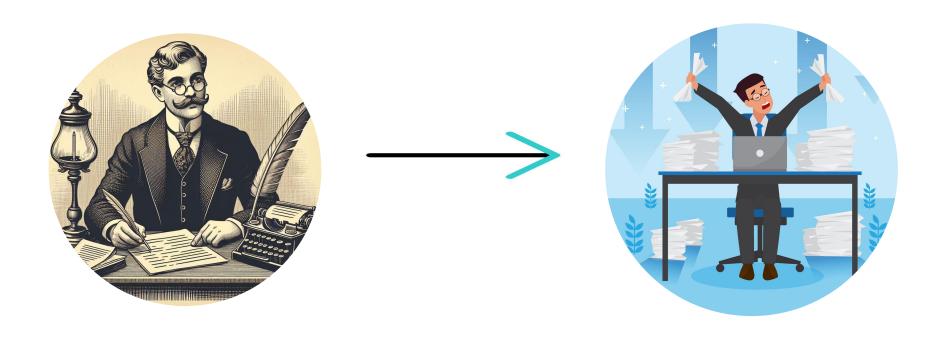

We will add an interface for clients in the marketplace to chat in order to arrange and facilitate purchasing instruments.

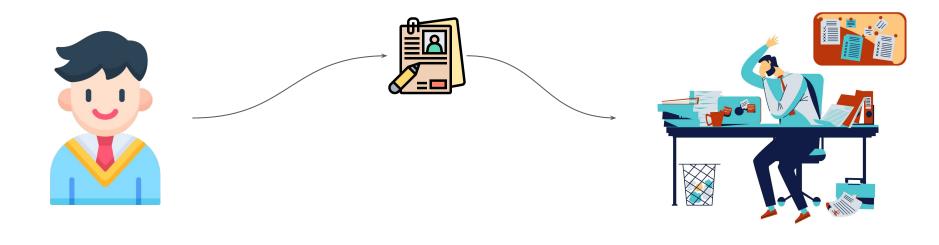

5. Market Analysis

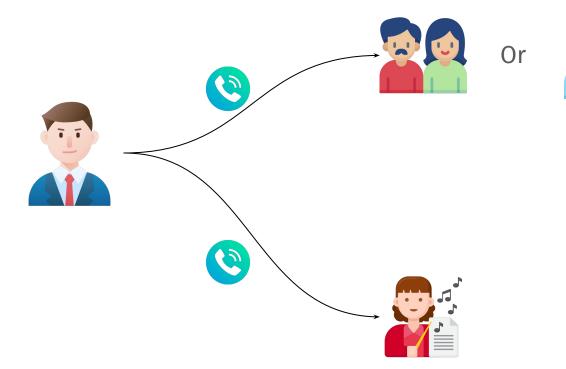

Conservatories in tunisia

Registration

Scheduling Sessions

Financial Management

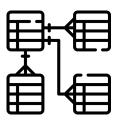

6. Implementation plan

Phase 0

Choose the development stack

Refining app features

Phase 1

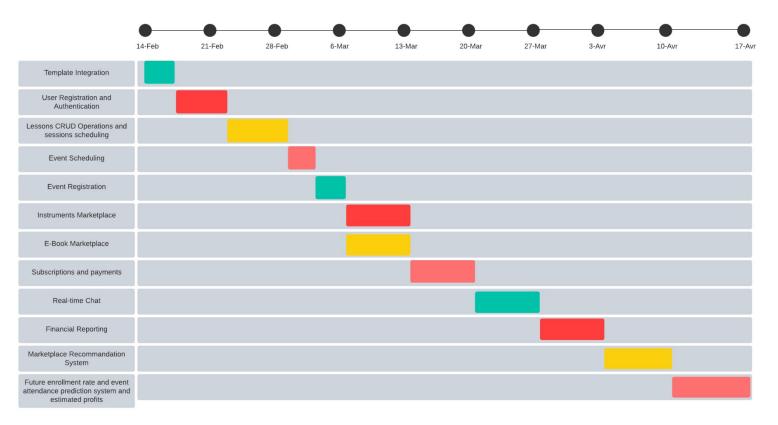

Developing basic app features

Phase 3
